- Trade spelling-sound consistency for meaningful information (magician, health)
- Trade sound-spelling consistency for meaningful information (affixes; e.g. -less, -ical)

# The information in English writing

Ana Ulicheva & Mark Aronoff

- Trade spelling-sound consistency for meaningful information (magician, health)
- Trade sound-spelling consistency for meaningful information (affixes; e.g. -less, -ical)
- Information not available in spoken language
- English system is anarchic and self-organising

# What's wrong with 'honer'?

**Donald J. Trump** ✓  
@realDonaldTrump

Wow, every poll said I won the debate last night. Great honer!

- 'honer' can be parsed into [hone] + [-er] (i.e. someone who hones)
- 'honer' was an acceptable spelling for 'honour' between c. XV and XVII but disappears when 'hone' first used as a verb
- Same sound sequence; optimal spelling reduces ambiguity, facilitates access to meaning

# The information in English writing

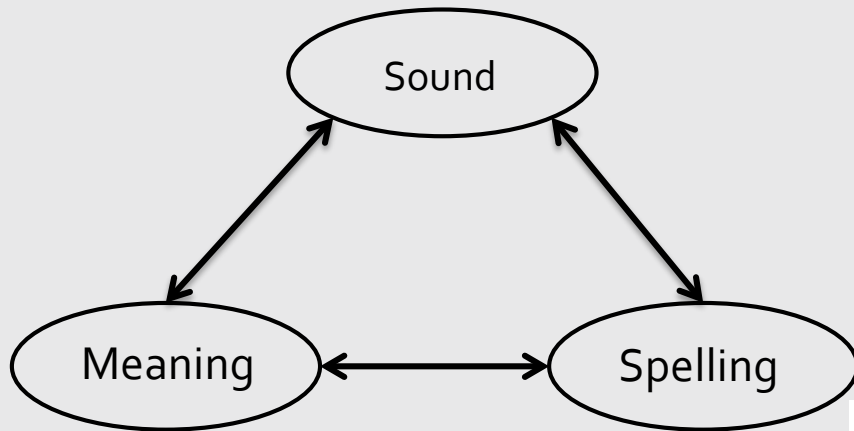

Ana Ulicheva & Mark Aronoff

- Trade spelling-sound consistency for meaningful information (magician, health)
- Trade sound-spelling consistency for meaningful information (affixes; e.g. -less, -ical)
- Information not available in spoken language
- English system is anarchic and self-organising
- Just scratching the surface!

# Our working framework

Jo Taylor & Matt Davis

How are spelling-sound and spelling-meaning regularities present in the writing system expressed in the reading system?

# Spelling-sound mapping, reading acquisition

- Substantial evidence that acquisition is vital in early reading
- Phonics
- Hook into spoken language knowledge

# Spelling-sound mapping, reading acquisition

## Reading Aloud Accuracy

# Spelling-sound mapping, reading acquisition

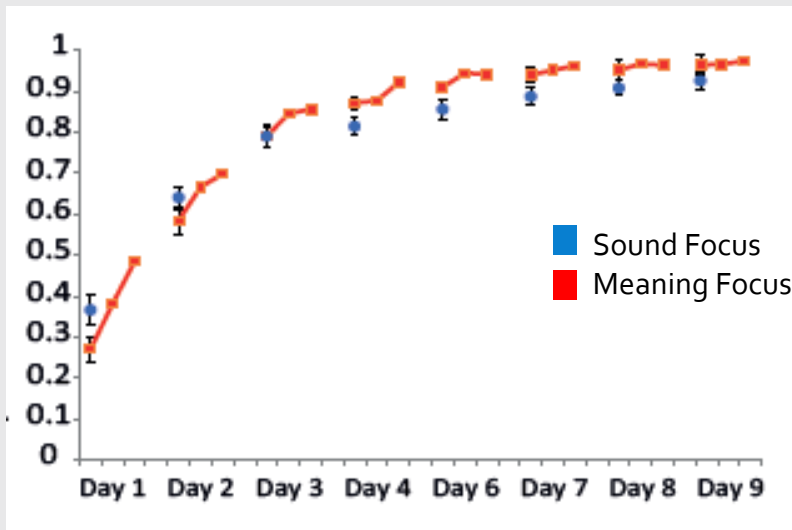

ROYAL  
HOLLOWAY  
UNIVERSITY  
OF LONDON

Jo Taylor & Matt Davis

Saying the Meaning Accuracy

No neural effort effects; saying the meaning equally difficult in spelling-sound and spelling-meaning training conditions

Learning to read an alphabetic system requires appreciation of spelling-sound relationship; information represented in dorsal pathway.

# Spelling-sound mapping, skilled reading

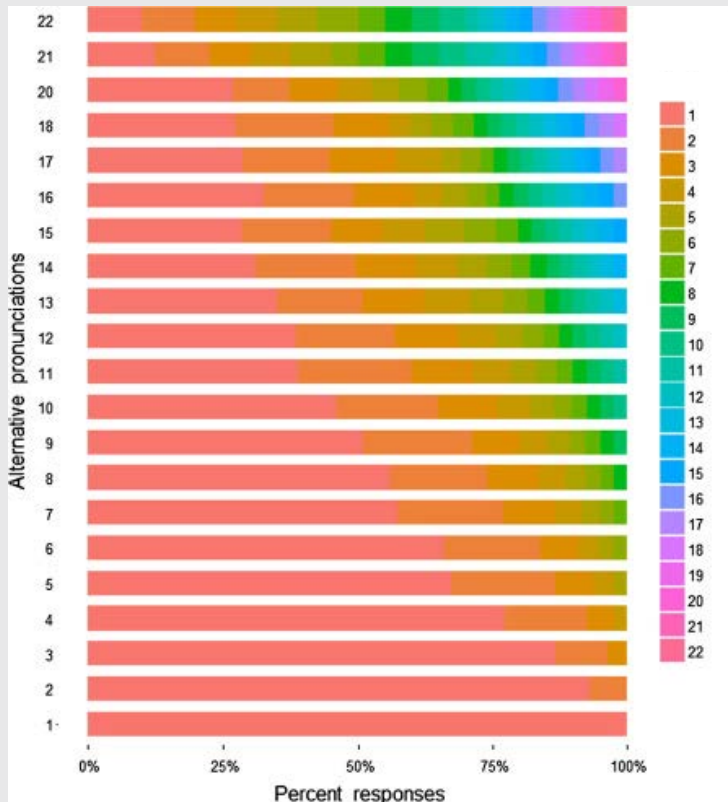

## What is the nature of spelling-sound knowledge used in skilled reading?

Betty Mousikou

bamper  
prulli  
vundle  
diswaps  
congeave

ucide

915 disyllabic nonwords \* 41 subjects

- Variation strongly attributable to regularities in the writing system
- Pronunciation variability predicted by strength of spelling-sound mapping for units in English

## What is the nature of spelling-sound knowledge used in skilled reading?

Betty Mousikou

### BAMPER

b	am	p	er	
100%	92%	100%	98%	pronunciation
96%	87%	56%	98%	1 <sup>st</sup> syll stress

### ELUCH

e	l	uch	
65%	100%	50%	pronunciation
13%	74%	100%	1 <sup>st</sup> syll stress

- Variation strongly attributable to regularities in the writing system
- Pronunciation variability predicted by strength of spelling-sound mapping for units in English
- Stress variability predicted by strength of spelling-stress mapping for units in English
- Effects also arise *within* individuals

## What is the nature of spelling-sound knowledge used in skilled reading?

Betty Mousikou

- Variation strongly attributable to regularities in the writing system
- Pronunciation variability predicted by strength of spelling-sound mapping for units in English
- Stress variability predicted by strength of spelling-stress mapping for units in English
- Effects also arise *within* individuals

**Spelling-sound knowledge mirrors statistical regularities in the writing system; considerable uncertainty in areas of mapping for skilled readers**

# Spelling-sound mapping, summary

- Primary regularity in alphabetic writing systems; critical in reading acquisition
- Underpinned by dorsal brain pathway
- Spelling-sound knowledge mirrors regularities in writing system
- Can spelling-sound knowledge support skilled, English reading?

# Spelling-sound necessary, not sufficient

- Development of expertise, laying down of long-term experience
- Regions of ventral pathway changing in sensitivity into adolescence (*Ben Shachar et al., 2011*)
- Substantial growth in number of words recognised between age 20 and 60; especially in periods of education (*Brysbaert et al., 2016*)

# Morphology and spelling-meaning mapping

- Item-level “orthographic learning” (*e.g. Nation, 2017*); interested in global impact of capturing spelling-meaning regularities
- Morphology dramatically reduces scale of the learning challenge
- Average 20 year old – 71,000 word forms - > 42,000 lemmas -> 11,100 base words (*Brysbaert et al., 2016*)

develop, develops, developing,  
developed, developer(s),  
undeveloped, undevelopable,  
developable, development(s),  
developmental, developmentally,  
antidevelopment, redevelop,  
predevelop, predevelopment

# Morphology and spelling-meaning mapping

- To appreciate meaningful connection input must be structured; need to discover spelling-meaning regularities
- Proliferation of spellings makes it possible for some spellings to be reserved as affixes
- How do we represent and use spelling-meaning knowledge, and how is it learned?

# Morphology and word recognition

William M-W & Lolly Tyler

**Skilled readers have discovered something about spelling-meaning regularity of affixes**

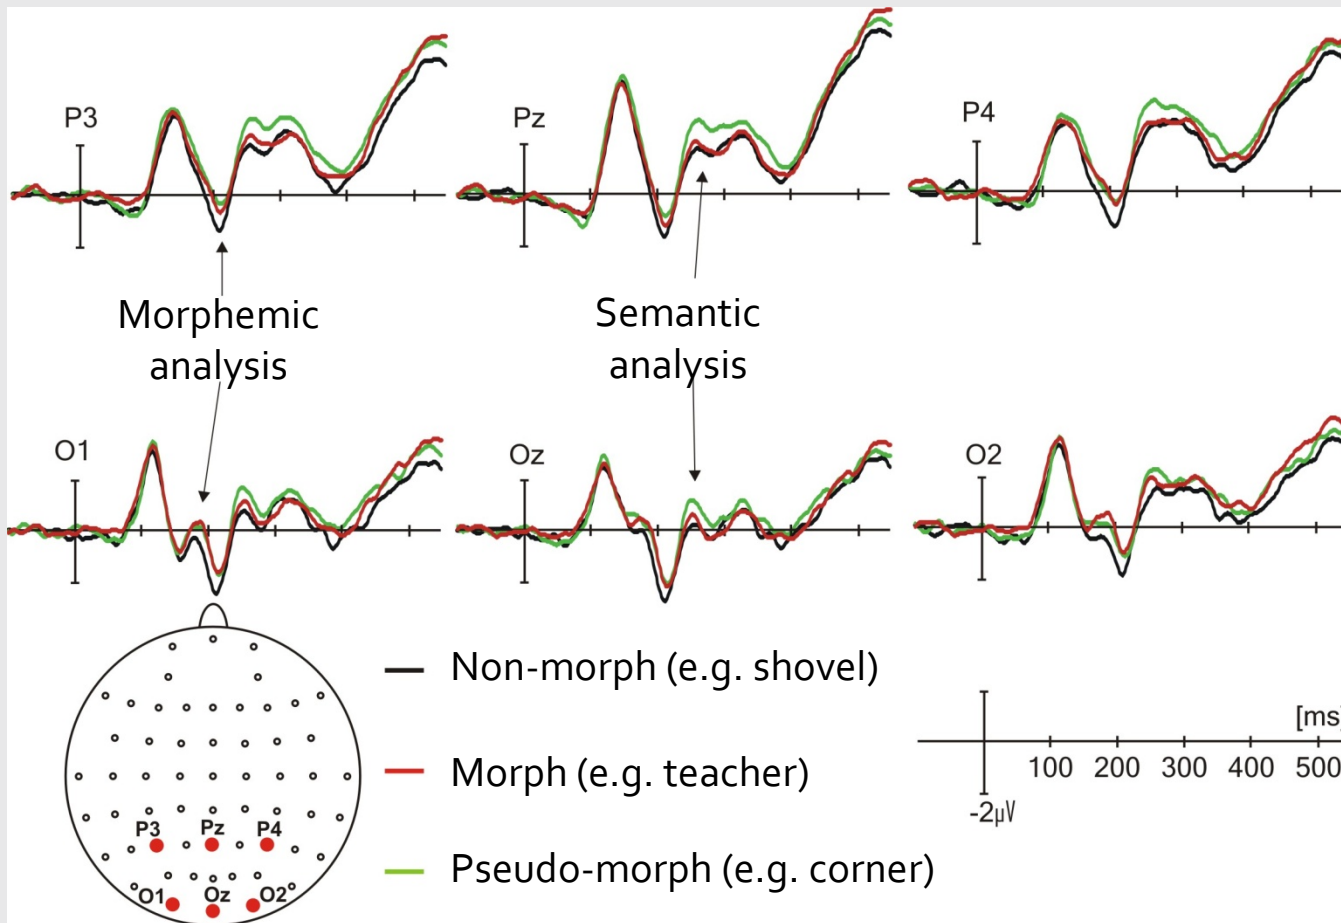

*Rastle, Davis & New (2004) PB&R  
Rastle & Davis (2008) LCP; Davis & Rastle (2010) PB&R  
Rastle, Davis, Marslen-Wilson & Tyler (2000) LCP*

# Morphology and word recognition

A. Lavric & D. Crepaldi

- Rapid morphological analysis ~190 ms
- Semantic analysis / integration ~250 ms

**Rapid, superficial analysis; only possible because of nature of the writing system**

# Acquisition of spelling-meaning knowledge

- How do we acquire representations that permit us to conduct this superficial analysis?
  - Skilled readers' knowledge mirrors consistency of the mapping from spelling to function (*Ulicheva, Aronoff & Rastle, Friday 9.30am*)
  - Laboratory acquisition driven by contextual diversity and spelling-meaning consistency (*Tamminen, Davis, & Rastle, 2015, Cognitive Psychology*)

# Morphology and the ventral pathway

- IFOF
- ILF
- UF

- AF fronto-temporal
- AF fronto-parietal

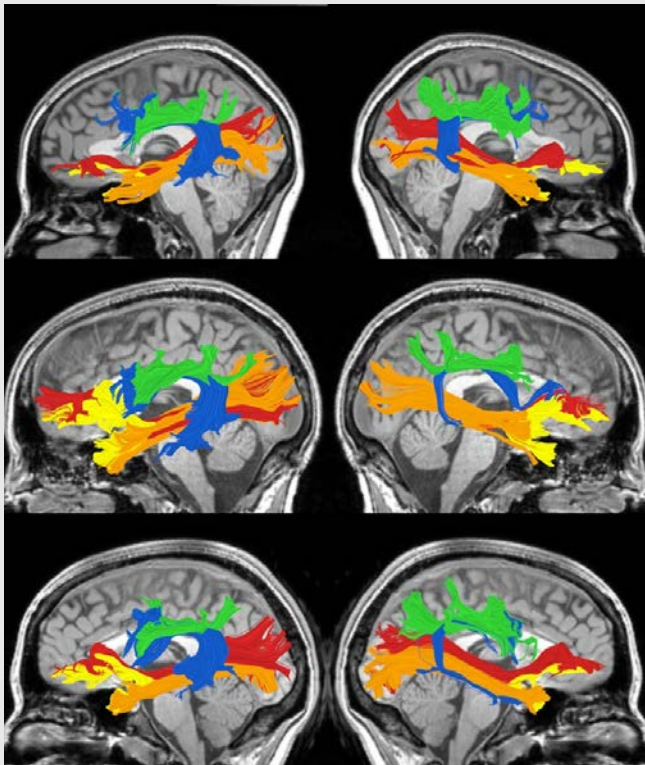

# Morphology and the ventral pathway

- IFOF
- ILF
- UF

- AF fronto-temporal
- AF fronto-parietal

- Behavioural measure of sensitivity to morphemes in reading (N=45)
- Significant correlations with diffusion properties in all **ventral** tracts in left hemisphere; converging evidence from fMRI
- Relationship remains after controlling for phonological processing (nonword repetition)

# Morphology and the ventral pathway

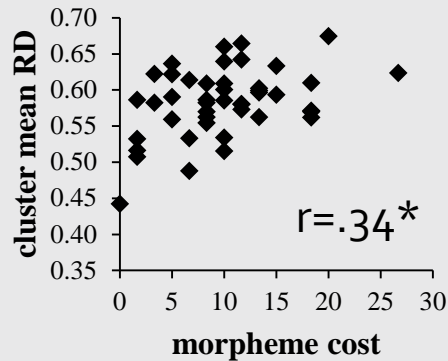

Left IFOF

Left ILF

Right IFOF

Left UF

Morphological knowledge is associated with diffusion properties of ventral white matter pathways

# Conclusions

- Properties of writing systems define reading systems; written language is not the same as spoken language; changes to support skilled reading
- English writing comprises spelling-sound and spelling-meaning regularities; spelling-meaning regularities are a consequence of spelling-sound inconsistency
- Spelling-sound knowledge mirrors writing system; represented in dorsal pathway; crucial in reading acquisition but cannot support skilled reading
- Spelling-meaning knowledge mirrors writing system; represented in ventral pathway; crucial for rapid access to meaning from print
- The need for more conversations ...
